Net Acres Treated that Result in Watershed Improvement/Protection. 75.1

Explanation: Based on the project map showing all practices, the Net Acres Treated is the area that falls within the outer boundary of all treatments combined, regardless of whether the treatments overlap the same area or occur in different areas. Do not double count acres. For example, 30 acres of site preparation and 30 acres of planting are counted as a net 30 acres treated; not 60 acres for the two practices combined. Another example is one project area involves 30 acres of site preparation and planting, and in another separate project area 25 acres of "Planting Streamside Vegetation." The net treated acres for the project is 55 acres. Think of it as the footprint of all treatments without double counting practices on the same acre

Comments (Required if final invoice): Contract Amendment extended the project 3 months, allowing field work to be completed Spring 2009.
